Shaking Table Feeder System
With Gt-250 Gemini Shaking Tables

SHAKING TABLE FEEDER SYSTEM WITH GT-250 GEMINI SHAKING TABLES

The Shaking Table Water Recirculation System for Gemini Shaking Tables makes it a stand-alone process that is easy to operate.

The integral feed hopper receives small volumes of gold concentrates for distribution to the table. Sell-able or smelt-able grade Gold Concentrate, Middlings and Tailings collect in separate containers, while allowing excess water to return to the built-in tank system. A centrifugal pump and filter system recirculates clean water to the spray bars of the shaking table. This system allows operating in a clean environment without the need for a permanent fresh water source.

Typical applications:

- Final Cleaning of small volumes of Hard-Rock or Alluvial Gold Concentrate, classified to -1mm (-20M)

CAPACITY RANGE

- < 100 kg/d Concentrate

FEATURES & OPTIONS

- Original Gemini GT250 Shaking Table, built in Australia by Mineral Technologies
- Built-in Tank System allows for stand-alone, unlimited Operation
- Water Recirculation Pump and Cartridge Filter System
- Assembled in Canada, Limited Inventory in Parksville, BC
